

DATE: September 29, 2005  
TO: Member Management Group (MAG)  
FROM: CBFWA staff  
SUBJECT: Support Material for October 4, 2005 MAG Meeting Agenda Item 3 to Discuss the Regional F&W Management Plan

Following the September 21, 2005 MAG meeting to discuss a regional fish and wildlife management plan, CBFWA staff proposes the following template for consideration in developing a regional database of population level information. The attached is an Excel table example of the database addressing the first three items that were identified by the MAG.

It is anticipated that from this database, an annual report could be generated to demonstrate the "Status of the Resource." Using the Annual Status of the Resource Report as a framework, the elements of items 4 and 5 could be addressed. However, the first step would be to establish the comprehensive database presented here.

From the September 21, 2005 Meeting Notes  
*The plan/report will:*

1. *Identify focal populations by species and provide an assessment of their present status;*
2. *Identify the fish and wildlife manager's target objectives for each focal population;*
3. *Identify the limiting factors affecting the focal populations (within and out of basin);*
4. *Provide a framework for evaluating and/or identifying strategies to address the limiting factors;*
5. *Provide a framework for creating a monitoring and evaluation plan in the future; and,*
6. *Provide an organizational structure to support both species and geographic distributions, depending on user group.*

If you have questions please contact Neil Ward or Tom Iverson at (503) 229-0191.
