

Columbia Basin Fish and Wildlife Authority 2005

Determining a Site's Value for Fish and Wildlife From Impacts to Mitigation

Biological Neat Stuff

- Progressives have been hampered by a focus on specific issues
“Nature is too complex and we do not have a good way to account for all the species that could potentially use a site”
- In facing the force of nature, one can only be "flexible" and "adjust."
“Yet we manage for unique or rare (T&E) and common is usually only acknowledged or assessed using one or a few species”
- Unable to communicate how each issue fits into a coherent set of values, we lose the fight for a language that resonates with the American public.

Environment is metaphorically framed in terms of economics and market forces

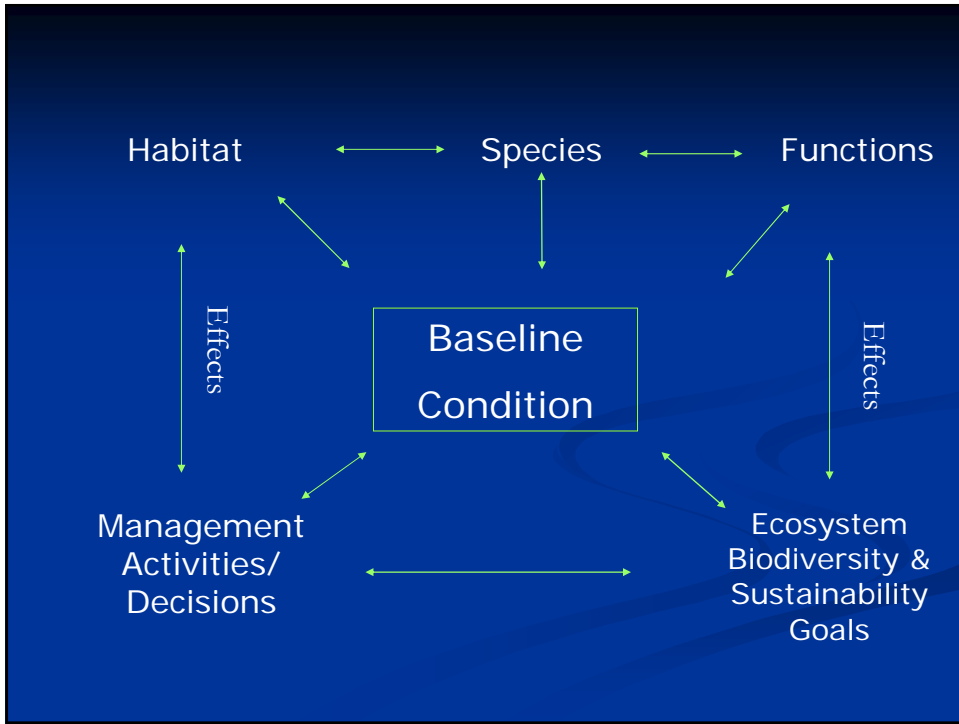

“How much is a Owl or Ants really worth”

But most of us believe that much of the Environment is not a product that can be bought

**Old Concept
Yields a
New Currency**

Habitat Value

**Species-Habitat-Function
Gives a Value
for Fish and Wildlife**

**Consistently Identifies
47 Structural Conditions
and Land
Uses**

**Consistently Identifies over 350 Key
Environmental Correlates (KECs)**

**Habitat elements that are key or critical
microhabitat, substrate, or other
environmental (physical or biological)
factors thought to most influence a species
distribution, abundance, fitness, and viability**

Northern River Otter has **57** Key Environmental Correlates (KECs)

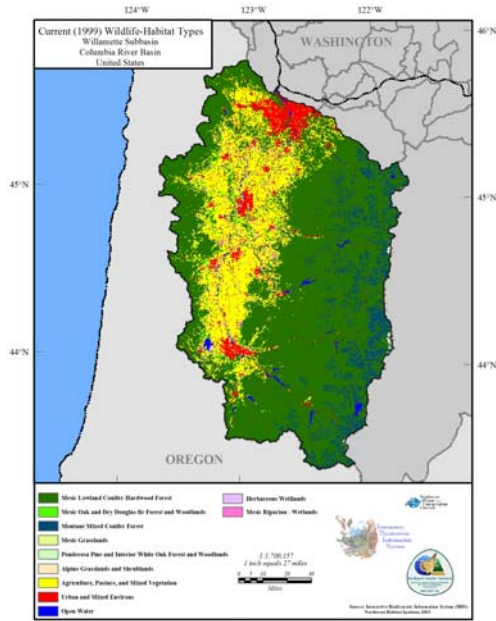

- 1.1.1.2 down wood in riparian areas
- 2.3 beaver/muskrat activity (dams, lodges, ponds)
- 2.4 burrows (aquatic or terrestrial)
- 4.2.1 oxbows
- 4.2.10 overhanging vegetation
- 4.2.12 banks
- 4.2.4.1 boulders
- 4.2.4.2 cobble/gravel
- 4.2.5.1 submergent vegetation
- 4.2.6 coarse woody debris in streams and rivers
- 4.2.7 pools
- 4.2.8 riffles
- 4.2.9 runs/glides
- 4.3 ephemeral pools
- 4.6 lakes/ponds/reservoirs

Key Ecological Functions (**KEFs**)

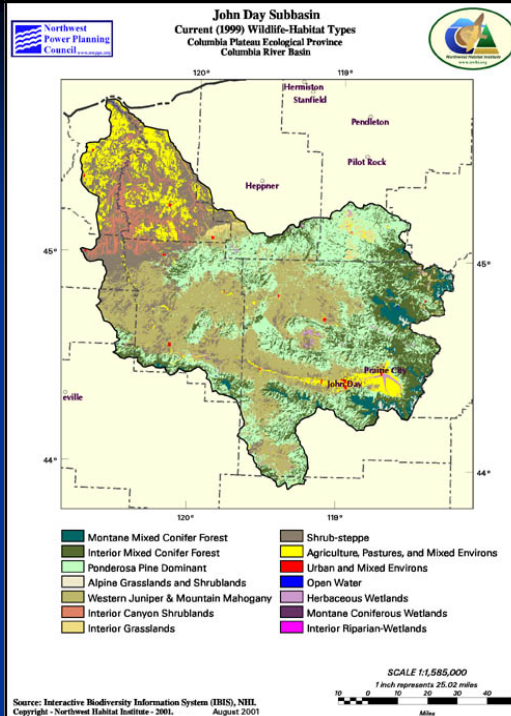

The principal way organisms influence the environment

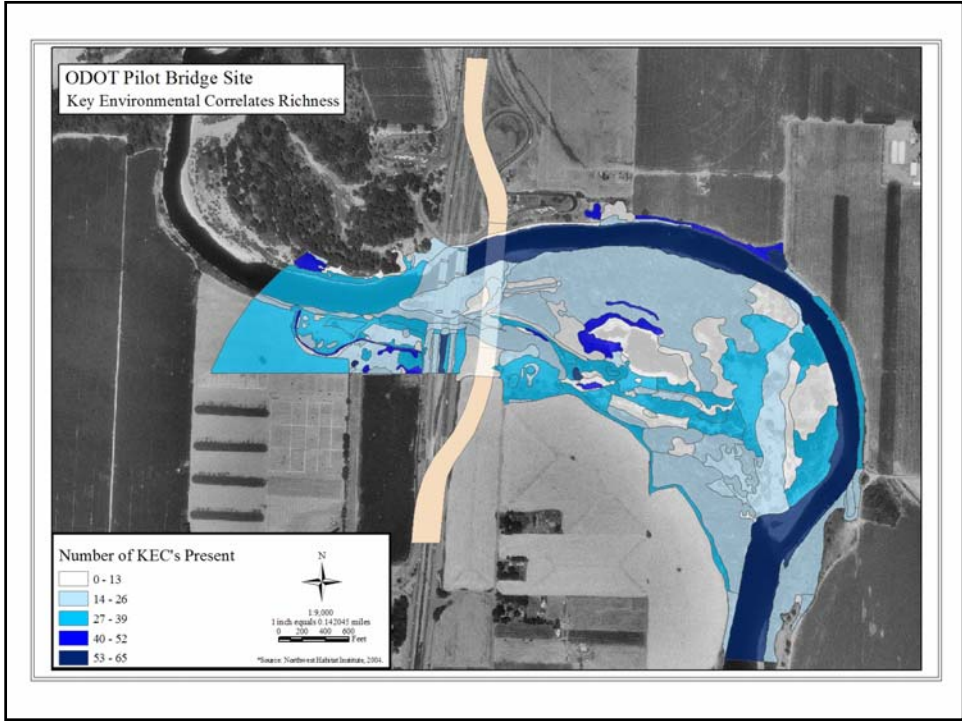

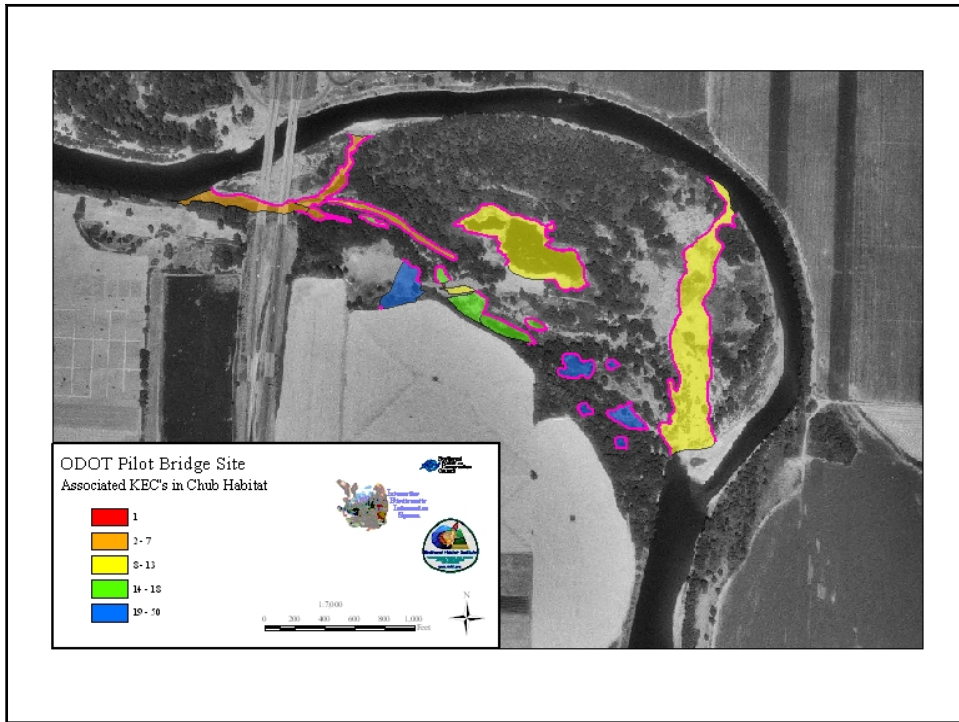

Ecoprovince

Subbasin

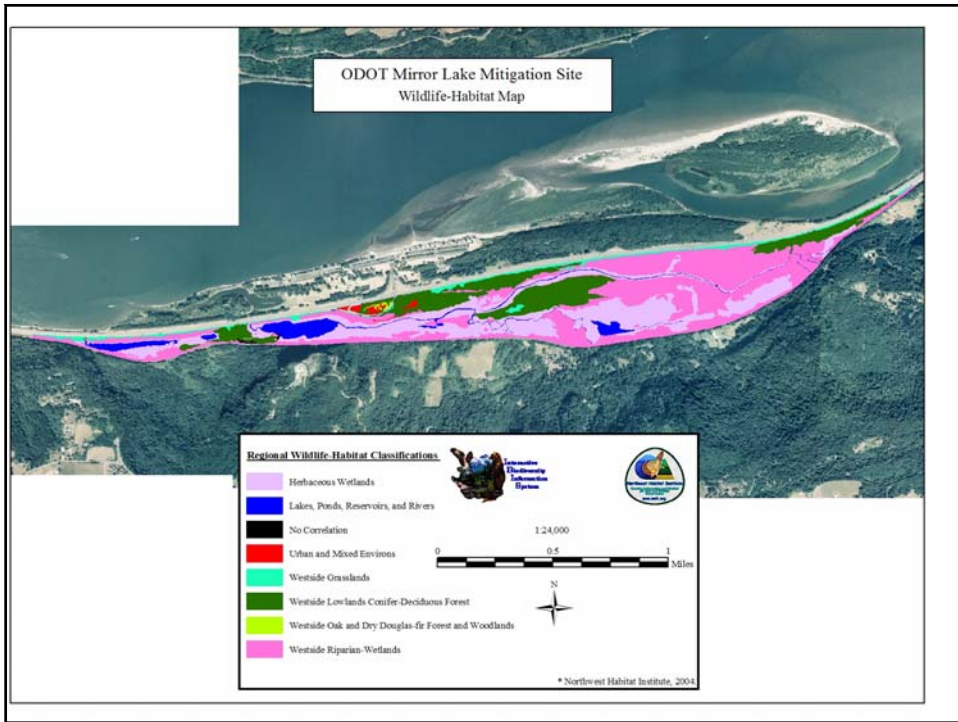

FRI = Functional Redundancy Index
 Number of species potentially performing
 KEFs/Number of KEFs

**Determined for each Ecoprovince
 by Wildlife Habitat Type**

Wildlife-Habitat Acreage X **FRI**

Minus Adjustment Factors

Rapid Site Value

Functional Redundancy Index

Habitat Type	Ecoprovince		
	Lower Columbia	Willamette Valley	Klamath Mountains
Westside Lowlands Conifer-Hardwood Forest	17.90	18.87	0
Westside Oak & Douglas-fir Forest & Woodlands	17.51	18.15	18.25
Westside Riparian	19.10	20.37	0
Eastside Riparian	0	0	21.72
ETC>>>>>>>>>>			

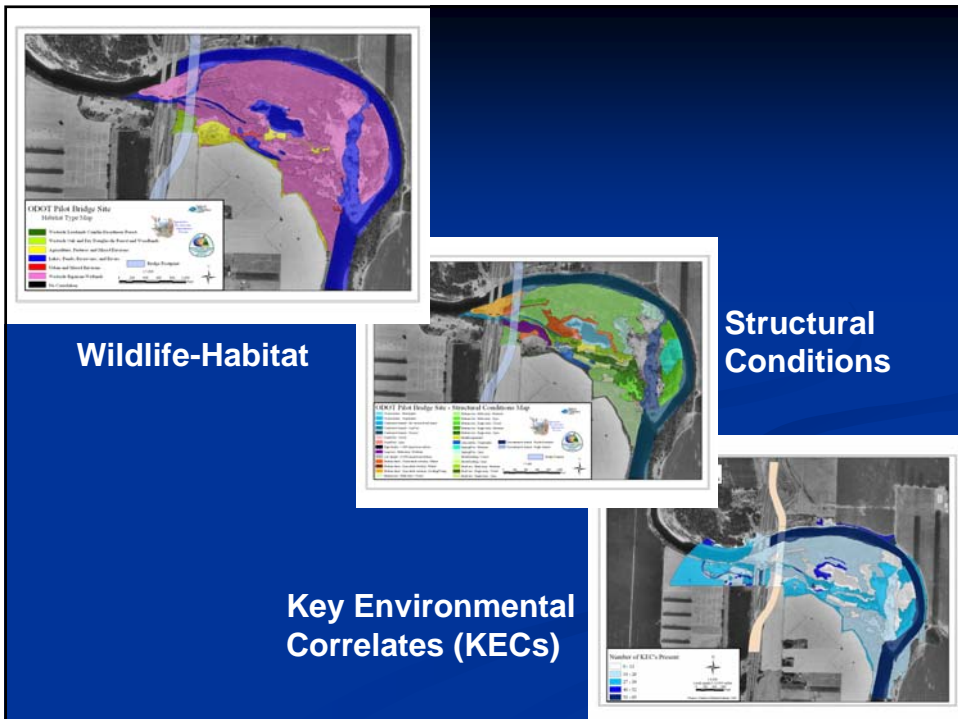

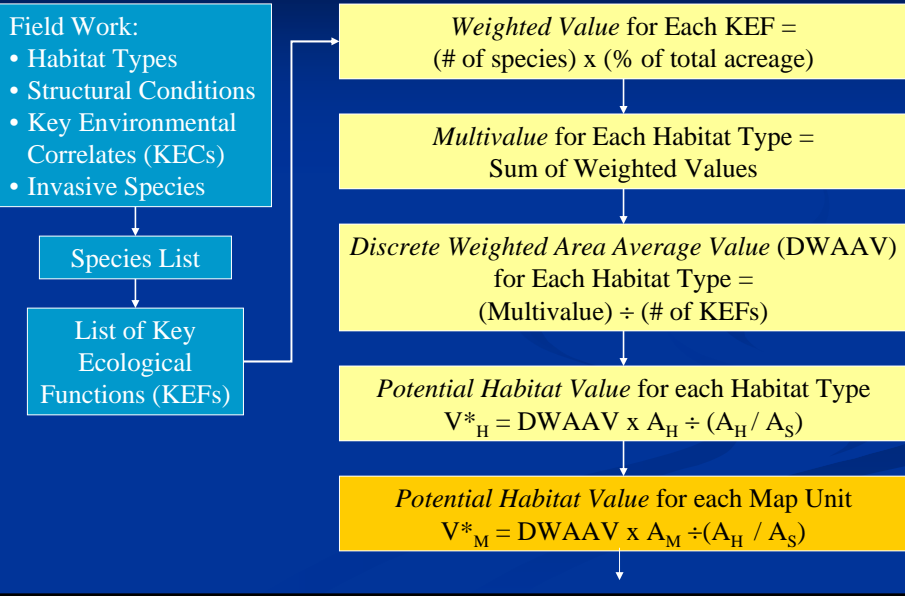

Local Condition	Local Condition Adjustment Factor
Adjacent Land Use	
High Urban Development like Major Roads	0.05
Intensive Industrial Forestry or Agriculture	0.05
Invasive Plant Species within Map Unit	
25-50% cover	0.1
50-75% cover	0.2
>75% cover	0.3
Substantial Anthropogenic Impacts within Map Unit (soil compaction, pollution, etc.)	
Limited	0.05
Extensive	0.1
Map Unit Area	
Map Unit Area > 20 acres	0
Map Unit Area > 10 but ≤ 20 acres	0.05
Map Unit Area > 5 but ≤ 10 acres	0.1
Map Unit Area > 1 but ≤ 5 acres	0.15
Map Unit Area ≤ 1 acres	0.2

Wildlife-Habitat Type	Acre	FRI	Anthro. Impacts	Adjacent Land Use	Grass/Forb Layer	Shrub Layer	Tree Layer	Invasive Species Factor	Habitat Value
Westside Riparian	0.11	20.4	0.95	0.56	0.90	0.70	1.00	0.86	1.0
Westside Riparian	0.03	20.4	0.95	0.60	0.90	1.00	1.00	0.97	0.4
Urban Mixed Environs	0.29	4.1	0.95	1.00	1.00	NP	NP	1.00	1.1
Open Water	0.78	10.4	0.95	0.96	NP	NP	NP	1.00	7.4

Advance Establish a Baseline Value

- Inventory site for habitat types, structural conditions and key environmental correlates (KECs)
- Determine the amount and proportion of each habitat type on site
- Determine a potential species list for the site
 - ❖ Based on habitat types, structural conditions, & KECs
- Determine potential number of functions that may occur on site
 - ❖ Based on the potential list of fish and wildlife species

Baseline Habitat Value

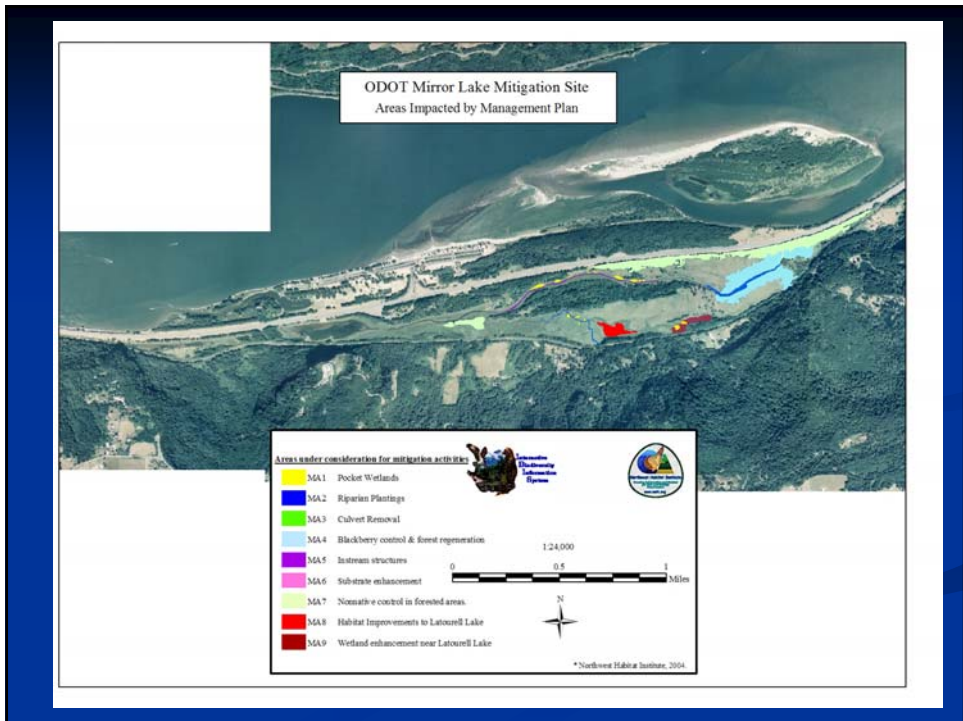

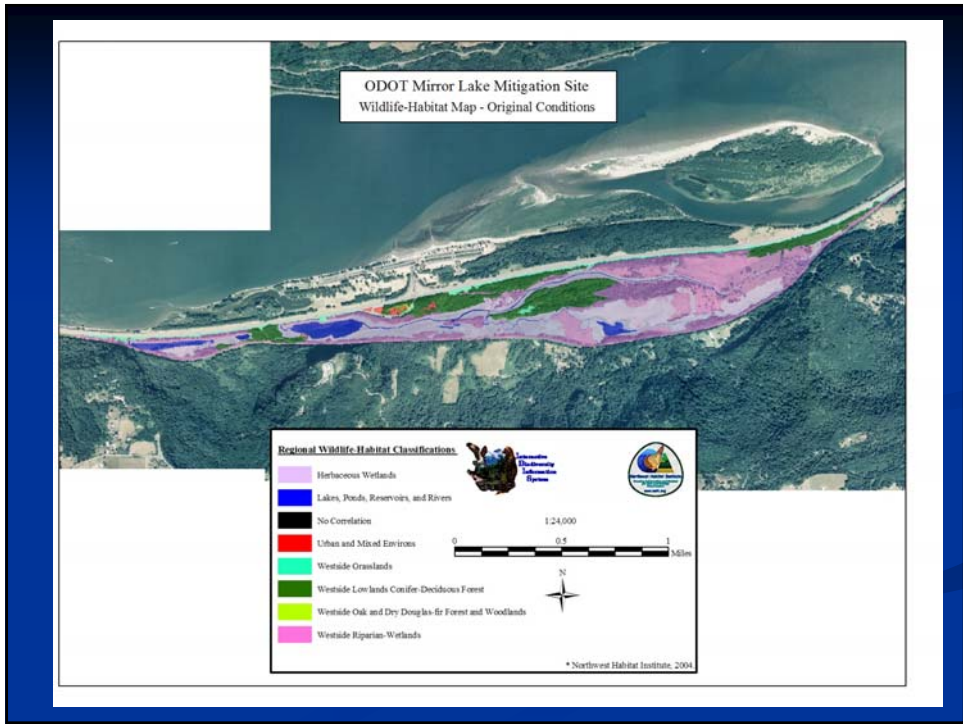

Baseline Habitat Value

<u>Step</u>	<u>Spatial Scale</u>
1. Determine baseline <i>potential</i> habitat value ↓	Habitat Type
2. Determine baseline <i>potential</i> habitat value	Map Unit
↓ <i>invasive species factor</i>	
3. Determine baseline habitat value ↓	Map Unit
4.a. Determine baseline habitat value	Habitat Type
4.b. Determine baseline habitat value	Entire Site

Anticipated Future Habitat Value

<u>Step</u>	<u>Spatial Scale</u>
1. Delineate management actions ↓	Habitat Type / Map Unit
2. Determine future <i>potential</i> habitat value	Map Unit
↓ <i>invasive species factor</i>	
3. Determine future habitat value ↓	Map Unit
4.a. Determine future habitat value	Habitat Type
4.b. Determine future habitat value	Entire Site

Mirror Lake – Site Value Presentation

★ MA4 – Blackberry Control & Forest Regeneration

- Mechanical removal of blackberry
- Potentially supplement mechanical removal with herbicide treatments
- Plant native herbaceous and woody species (primarily composed of Oregon ash and cottonwoods)

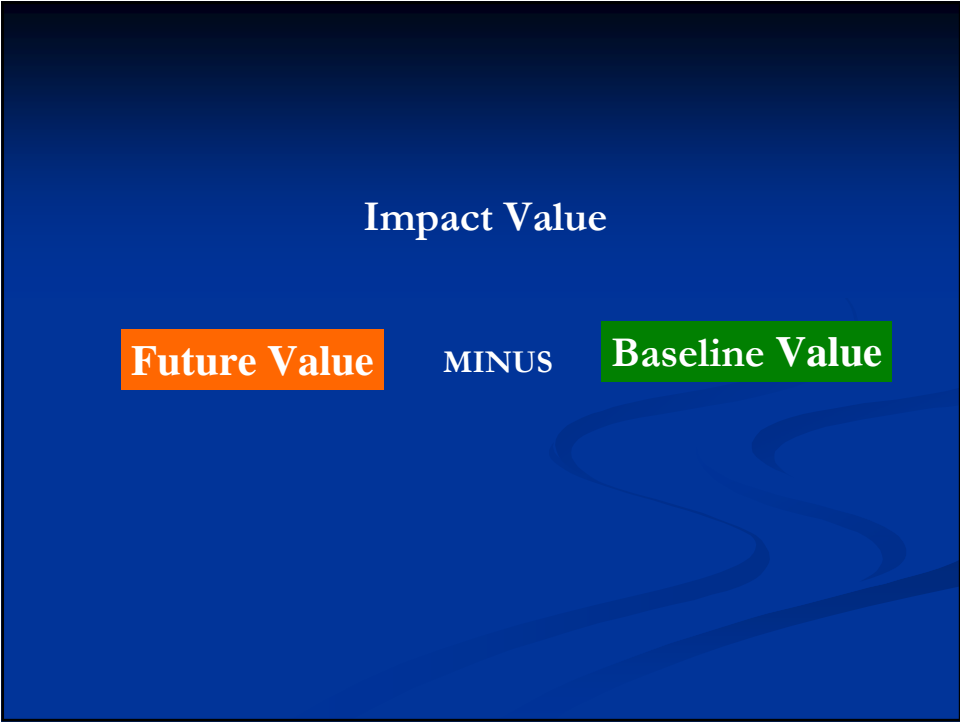

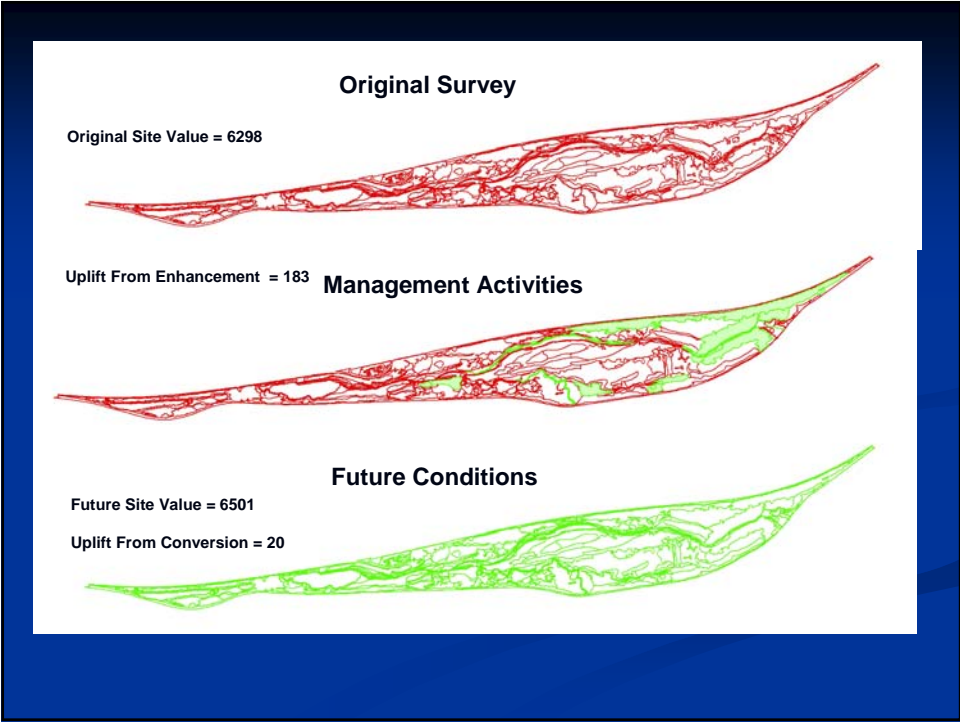

Mirror Lake – Site Value Presentation

MA1 – Pocket Wetlands

- Mimic existing on-site wetlands with native species dominance
- Excavate to create hydrologic regime that favors native species
- Plant native species (e.g., sedges, wapato, etc.)
- Import downed wood structures for habitat diversity
- To be constructed along margins of Latourell and Young Creeks
- Provide off-channel fish habitat during high flows

Baseline Condition

HABITATS	Westside Oak and Dry Douglas-fir Forest & Woodlands	Agriculture, Pasture, and Mixed Environs (westside)	Urban and Mixed Environs (westside)	Lakes, Rivers, Ponds, and Reservoirs	Westside Riparian - Wetlands
