EXECUTIVE SUMMARY

The Northwest Power and Conservation Council (NPCC) chartered a Wildlife Crediting Forum (Forum) in late 2009 to examine longstanding issues with the crediting of wildlife mitigation actions implemented through the NPCC's Columbia River Basin Fish and Wildlife Program. The Program accounts for credits (informally called the "Ledger") for wildlife habitat improvements mitigating for the impacts of construction and operation of the Columbia River Hydropower System. The Bonneville Power Administration (BPA) makes acquisitions or direct payments funded from FCRPS customer rate payer revenues to fish and wildlife co-managers to support mitigation based on a series of methodologies, practices, and NPCC policies.

Over the nearly 30 years of the Program, evolving policy direction, changes and refinements in methodologies, and individual mitigation agreements have created significant variations and misunderstandings. The initial charge of the Forum was to examine the wildlife part of the Program, and make recommendations to resolve issues with the application of the Habitat Evaluation Procedure (HEP) methodology used to value habitat through Habitat Units (HU). The Forum consists of the wildlife co-managers and key interests in the Wildlife Program: the 14 Columbia River Basin Tribes, the U.S. Fish and Wildlife Service, the states of Washington, Oregon, and Idaho, and BPA and BPA Customers. The Forum met eight times over the course of 2010, and established ad-hoc sub-committees to examine particular issues. *The attached report and appendices detail the course and outcomes of the Forum's deliberations*. The most notable achievements of the Forum are:

- The Forum worked together in a consistently collaborative and consensus driven manner, notwithstanding the differing experiences and visions for the Program held by individual members.
- The system of valuing and accounting for wildlife mitigation is better and more uniformly understood by managers and key interests than perhaps at any time in the past. While not every issue or dispute has been resolved, and significant anomalies remain, the commonalities developed by the Forum provide a solid basis for bring the Program to a successful conclusion.
- Members of the Forum came to a general consensus that the Ledger could and should be improved and better understood, but that the best way to successfully conclude the Program was to undertake agreement negotiations.

Other key achievements of the Forum include:

- Agreeing on logical sub-regions within the Basin for the purposes of understanding and refining the Ledger more effectively, and for defining the geographic scope of future agreement negotiations.
- Making significant advances in correcting Ledger inconsistencies, and where corrections were not possible providing for a clear understanding of the origins of those inconsistencies.
- With the guidance of ad-hoc Forum subcommittees, the Forum came to general consensus on issues addressing wildlife credits in Federal lands, wildlife credits for primarily fish mitigation projects, and the reasons for variation in HEP application across Columbia River Basin.

- Agreed that, with only one exception, the 2009 NPCC accounting of Loss Assessments was acceptable (the nuance being Idaho, where separate efforts ongoing in the course of Forum deliberations appear to be resolving issues in that region).
- Analyzing the pattern and particulars of the assignment of HUs credits to hydroelectric facilities and making suggestions for more consistent and equitable assignments in the future.
- Developing extensive tables and mapping clarifying a wide range of elements and considerations with respect to the Wildlife Program.
- Mitigation undertaken "Pre-Act" (e.g.: before the Federal Northwest Power Act of 1980)` was undertaken in such a different manner and by a different set of agencies that an equitable and accurate incorporation into the post-Act Ledger is probably not possible

PURPOSE

The purpose of this summary report is to capture the work conducted by the Wildlife Crediting Forum (**Forum**). The Forum was chartered in late 2009 by the Northwest Power and Conservation Council (**NPCC**) to provide input on the Council's Wildlife Crediting Program (**WCP**). This summary report provides an overview of the Forum's discussions and direction through December 2, 2010. This summary report and appendices also reflect the additional work conducted in January and February 2011 with Bonneville Power Administration (BPA) and Columbia Basin Fish and Wildlife Authority (CBFWA) staff to further analysis WCP records by sub-basin. The Forum is scheduled to meet on March 17, 2011 to review this sub-basin work.

This summary report only reflects the input of individual Forum members, and does not necessarily represent the policy position(s) of the tribes, agencies, and stakeholders they represent. Forum members have been clear that they serve only in an advisory role to NPCC.

BACKGROUND

NPCC chartered the Forum to provide advice on the quantifying and accounting system (informally known as the **Ledger**) for the wildlife habitat mitigation credits associated with the construction and inundation impacts of the Federal Columbia River Power System (**FCRPS**) within the Columbia River Basin (**Basin**). The database that currently houses the Ledger is called **Pisces**. The WCP was initiated in 1981, and has been modified from time to time (most recently in 2009) by NPCC in updating the overarching Columbia River Basin Fish and Wildlife Program (**Program**).

The Forum consists of wildlife co-managers representing the 14 tribes and 3 state fish and game departments (Oregon, Washington, Idaho) impacted by FCRPS; and representatives of the U.S. Fish and Wildlife Service (USFWS), BPA, and BPA Customers. The State of Montana is not a Forum participant, as wildlife mitigation issues relating to FCRPS have been settled by prior agreement between BPA and that state. CBFWA and NPCC staff acted as advisors to the Forum. A private consulting firm (Parametrix) was engaged to facilitate Forum processes and to provide for augmented technical analysis of the Ledger.

The original Forum charter called for the development of recommendations with respect to:

- Developing a commonly accepted "Ledger" of Habitat Units acquired by BPA.
- Developing a common database for tracking, assigning and recording HU's.
- Resolving other issues about accounting for HU's.
- Other issues related to wildlife crediting, including the use of Habitat Evaluation Procedures (HEP) or alternative evaluation procedures.

The Forum met eight times in 2010 to address the WCP. The Forum also convened three subcommittees to discuss specific issues (credits for fish projects, Federal lands, and general Ledger issues). Each of these sub-committees met one or two times, and produced reports which were provided to the full Forum. The Forum conducted WCP orientation and reviews over the course of its first three meetings. Starting in May 2010, the Forum focused on the difficulty of coming to collective agreement on the resolution of even the first issue specified in its NPCC charter (see above). Several factors contributed to this challenge:

- Over the course of nearly 30 years, the NPCC has modified the WCP from time to time. In addition, some changes have not been uniformly interpreted by the comanagers.
- Crediting issues were found to differ depending on geographic area, specific hydropower projects, and the tribes or agencies involved.
- The database system housing the Ledger has also changed and evolved, and some ad-hoc "workarounds" have been made to fit data into database formats.
- The methodologies involved in the WCP have changed and evolved, and interpretation and application has varied in the field, across different sub-regions, and as entered in the Ledger.

In many cases, crediting has been resolved through individual project agreements. The terms of some such agreements are at variance with "standard policies" as articulated by the NPCC through its Program. *NOTE: the use of individual agreements is permitted by the Program.*

Reflecting on these factors, the Forum concluded that the many technical and recordkeeping issues with the Ledger, overlaid with unresolved policy issues, would make full resolution in accordance with the original NPCC charter difficult. The Forum discussed therefore the possibility of "settlement agreements" as a more effective means of resolution. At the same time, the Forum indicated that the technical analysis of the Ledger should continue to help resolve or make clear as many outstanding issues as possible. NPCC concurred with this overall "revised" approach and goals at its July, 2010 meeting.

NOTE: The possibility of shifting to a "settlement agreement" option is briefly referenced as an acceptable alternative in the original Forum charter: ".... or strategies that will allow parties to achieve long-term settlement agreements." In October 2010, a settlement for the Willamette River Sub-basin of the FCRPS was signed between BPA and the State of Oregon.

On December 2, 2010, the Forum met and discussed ongoing issues and concerns. NPCC staff and the consultants recommended that additional <u>Basin-wide</u> technical analysis was becoming more costly than merited by the resulting understanding or improvements to the Ledger. The suggestion was made that the most valuable additional analysis would be that conducted at the <u>sub-basin level</u>. A considerable effort with respect to this detailed technical

analysis was undertaken **up through March 1, 2011**. The outcomes of these sub-basin by sub-basin reviews are attached as Appendix D.

Also at the Forum's December 2 meeting, a matrix prepared by <u>NPCC and Parametrix staff</u> was presented that estimated the level of agreement (high, medium, low) by sub-basin for each of the remaining issue topics. A version of this matrix, revised as per sub-basin reviews, is included in each of the attached sub-basin appendices.

NOTE: Inclusion of the following issue topics in this summary report does not mean that the Forum has reached full consensus on any given item. Each may require additional discussion on the part of the full Forum and/or at the sub-group level. Accordingly, specific recommendations are not included. Some divergent viewpoints remain (an example being over the 2:1 crediting ratio). It is also important to keep in mind that within the context of developing settlement agreement(s) that a full resolution of many of the remaining Ledger issues identified herein may be moot, as settlement(s) may simply supplant the issue irrespective of the degree to which it is technically resolved (or not).

CREDITS ON FEDERAL LANDS

NOTE: This issue was referred to an ad-hoc sub-committee of the Forum. The summary below reflects the deliberations of that sub-committee.

Some parcels identified, acquired and restored through WCP are in Federal ownership. The purchase of Malheur River parcels included federal grazing allotments along with the fee title property. To maintain control of the allotments, they must be grazed to some degree. It is clearly more beneficial for the WCP to have the allotments under a manager's control, but crediting must take into account this special management situation. The other cases where Federal lands are involved are on US Forest Service lands with riparian restoration projects for fish benefits. These projects include some degree of upland management that provides wildlife benefits, but this also needs to be evaluated on a case-by-case basis.

In all cases, the issues are twofold:

- Whether Federal actions that are generally creditable, but have happened or would have happened anyway based on a Federal agency's usual and customary responsibilities, should be included.
- Whether the Federal agency's usual and customary responsibilities are such that the protections for wildlife values are assured over time.

This Forum sub-committee suggested that the following standards be applied to the question of crediting of Federal land projects:

- Must meet the current Program criteria for wildlife projects.
- Must be "permanently" protected <u>minimum</u> of an easement with a term of equal to the life of the FCRPS, or an appropriately formulated and adopted Federal management plan.
- Must primarily benefit <u>priority</u> wildlife habitat, species or populations (as defined by Federal, state, or tribal wildlife management plans or sub-basin plans).
- Subject to a completed wildlife management plan.
- Subject to an "adequately funded" long-term restoration and/or maintenance agreement

• Located in the same province as the FCRPS hydroelectric dam against which it is being credited.

The sub-committee also suggested that BPA receive credit for any enhancement provided by the management actions taken by the Federal agency, subject to:

- The enhancement credit shall be determined through the use of baseline HEP data if available, or from existing Federal agency data sets if HEP data are not available.
- The enhancement credit being in "perpetuity" (e.g.: life of the FCRPS), unless there is a change in the management plan employed by the Federal agency that results in the reduction of enhancement values. In such cases, the enhancement credits would be adjusted to reflect the reduced value.

CREDITS FOR FISH MITIGATION

NOTE: This issue was referred to an ad-hoc sub-committee of the Forum. The summary below reflects the deliberations of that sub-committee.

This Forum sub-committee clearly recognized that acquisition and restoration projects primarily, or even exclusively, designed for the purposes of mitigating for fish losses resulting from the FCRPS hydroelectric dam system could and does benefit wildlife. The sub-committee identified the need to develop guidelines for future habitat projects; and the need to state up-front what type of benefits were being sought (e.g.: what are the benefits for fish and wildlife?). The sub-committee also felt that projects that have joint benefits to fish <u>and</u> wildlife should be encouraged.

The sub-committee suggested the following should apply for fish projects to receive wildlife credits:

- Specific wildlife management plans for the project area need to be completed, approved and implemented.
- Long-term operations and maintenance funding for wildlife species/habitats must be in place and "adequate."
- Appropriate permanent land protections (easements) should be applied, in perpetuity and with adequate protection language.
- The protected wildlife species/populations/habitats should be "priority" and so defined by in-place Federal, state or tribal management or sub-basin plans.

The sub-committee also reviewed a specific list of such projects (Table B-1). Projects were classified into three tiers. Tier 1 includes wildlife projects supported by anadromous fish funds that should be credited. The projects shown as Tier 2 were left as subject to "further review". Projects in the Lower Columbia Estuary were flagged as "special case" and included as Tier 3. These Tier 3 projects were identified by the sub-committee as potentially available as operational loss offsets for project elsewhere in the FCRPS. Tier 4 projects are special existing projects on federal lands that may be considered for credit. These three projects (Bear Valley, Deer Creek, Elk Creek) were moved by the Forum from the Federal Lands topic of this summary report and were directed to be included in Table B-1.

Parcel Name	Proponent	Sub-Basin	Acres	Tier
Forrest Conservation Area	CTWSRO	John Day	4,232	1
Oxbow Conservation Area	CTWSRO	John Day	1,022	1
Pine Creek (Wagner Conservation Area)	CTWSRO	John Day	9,000	1

Deer Creek		Upper Snake	n/a	4
Elk Creek		Upper Snake	n/a	4

Table B-1: Candidate Fish Projects for Wildlife Credits

* This figure is assumed to be double counting acreage by being included in the Fish Program and the Wildlife Crediting at the same time – need to verify in databases.

HEP APPLICATION VARIATIONS

NOTE: This issue was referred to an ad-hoc sub-committee of the Forum. The summary below reflects the deliberations of that sub-committee. In addition, this particular sub-committee addressed other Crediting issues. The full report of the sub-committee is attached as Appendix A.

The quality of habitat varies widely between watersheds, sub-basins, and major regions across the Basin. Thus the number of HU's per acre will also vary from watershed to watershed, sub-basin to sub-basin, etc. Similarly, acquisition costs differ greatly based on the location and type of acquisition. The type of acquisition method also varies greatly (see Table C-2 below). These variables were recognized by the Forum as a "fact of life" across such a large region, and such variation cannot be necessarily construed as inequity. The sub-committee's suggestions focused primarily on resolving such issues in <u>future</u> applications of HEP:

- Use tools, models, and methods that most accurately reflect the quality and quantity of the habitats being protected and managed.
- HEP methods used should reflect the site specific habitat parameters and management goals of the property and may differ from the HEP methods used in determining the losses.
- When disagreements arise, the project proponent should seek resolution through consultation with BPA, HEP team, and sub-basin or provincial co-managers to assure consistency and accuracy.
- Consider validating new or significantly modified models with appropriate testing and review.

One issue that became apparent after this sub-committee provided its report, and as the result of the sub-regional technical analysis conducted in January-February 2011, is that the interpretation and application of HEP could vary widely based on the sub-region involved. Significant variation in Northern Idaho was found for instance.

Project Manager	Acres*	Current	Protected	Enhanced	Minimum**
Burns-Paiute Tribe	8,145	4,705	3,937	768	0

Table C-1: Acres and HU's by Project Manager

* Acreage totals are under-reported due to missing acreage data for some parcels.

** Minimum totals are those parcels where there is only a minimum HU letter, or the subsequent HEP survey is less than the minimum HU letter total.

By way of further illustration, Table C-2 lists each acquisition type, and illustrates the acreage and percentage of each type as compared to the entire WCP. These acres only include those entered in Pisces for wildlife projects (fish projects are excluded).

Acquisition Type	Percent
Easement	4.86%
Exchange	0.21%
Fee Title	44.50%
Lease	5.92%
Mix	4.18%
WDFW (enhancement only)	25.52%
None/unknown	14.81%
Total	100.00%

Table C-2: Land Acquisition or Protection Method*

* Approximate percentages based on manager feedback. Recent updates to the Ledger have increased the portion of None/Unknown as more detailed updates are underway.

LOSS ASSESSMENTS

The Forum chose not to reconsider prior loss assessments, and generally accepted *Wildlife Crediting Program Table C-4* (as published in the NPCC-approved 2009 Program) as an agreed to measure of loss assessments (Program Table C-4 is attached as Appendix B to this summary report).

The Forum's determination notwithstanding, Shoshone-Bannock, Shoshone-Paiute, Idaho Department of Fish and Game (IDFG) and CBWFA staff have recently re-examined the Anderson Ranch, Palisades, Black Canyon, Minadoka, and Deadwood loss assessments for accuracy and consistency relative to other loss assessments across the Basin, and for the number of HUs credited against hydro facilities. HU losses reported in *Program Table C-4* were found by this group to be in error for the number of HUs listed for the Anderson Ranch, Black Canyon, and Palisades projects. In one instance, HUs were listed for sharp-tailed grouse, which was not a target species in any of the SE Idaho loss assessments.

NOTE: BPA's position is that it is not responsible for Deadwood Dam mitigation.

SE Idaho loss assessment calculations subtracted estimated post-project HU gains from the total losses in reporting "net" losses. Because most other loss assessments show just the "total" losses, the "net" HU losses reported in SE Idaho were 4,835 fewer than if the SE Idaho loss assessments had listed only the "total" HU losses (as was the case in other parts of the Basin). Habitat units gained from SE Idaho mitigation projects were also examined and subtracted from the losses shown in *Program Table C-4*. Results show 34.71% of the SE Idaho HUs (including those from Deadwood Dam) as mitigated.

NOTE: Program Table C-4 as published also included habitat gains.

AGREEMENT LENGTH & "CURRENCY"

The term of any settlement agreement(s) could <u>conceptually</u> range from 10 years, as with the Tribal Fish Accords; to 60 years, the projected life of the Federal hydroelectric system (FCRPS). The recent Willamette Settlement specifies a term of 15 years, which was deemed to be an adequate period for remaining mitigation obligations to be satisfied in that sub-basin. Conceptually, the term might also be in perpetuity, or for the life of the project(s). An issue to consider is the consequences of any events, natural or human made, that may change habitat conditions over the term of the agreement(s). This requires predicting those natural events which would increase or change the calculations of the remaining habitat needed for "full" mitigation, or identifying the impacts of other agreements encompassing the Basin, such as the Tribal Fish Accords.

The value of the agreement could also vary based on the term and the type of losses to be mitigated. For example, the value of the Willamette Settlement varies across several increments within its overall term. Settlement agreement(s) could also potentially use a variety of "currencies," including habitat units, acres, or funding. Agreements based on lump sum payments are considered most desirable by many Forum members, although there are challenges around how this may occur based on appropriate Federal funding levels, and regulatory compliance issues for BPA.

AGREEMENT SUB-REGIONS

The Forum suggests that several agreements are more feasible than a single Basin-wide settlement agreement. Several sets of sub-regions based on groupings of hydroelectric projects were identified. At its December 2 meeting, the Forum decided on the following sub-regions on which to base further technical analysis and potentially to define agreement groups.

- Main-stems Lower Columbia (Bonneville, The Dalles, John Day, McNary) & Lower Snake (Ice Harbor, Little Goose, Lower Monumental, Granite)
- Upper Snake
- Northern Idaho (Albeni Falls)
- Upper Columbia (Chief Joseph, Grand Coulee)

PRIOR AGREEMENTS

Prior BPA-to-tribe/agency agreements, Memoranda of Understanding, or contracts may inform and/or limit how settlement agreement(s) are reached. Some of these prior agreements include specific decisions about issue topics discussed in this summary report (for instance the 2:1 ratio), as well as including differing terms and requirements. The Forum does not consider it appropriate to re-open these prior agreements as part of any settlement package, but recognizes the impact such prior agreements may have on settlement considerations.

AGREEMENT TIMELINE

For any settlement agreement(s) to be funded, a series of steps must first occur, including NEPA review, budgeting and inclusion in a future rate case for BPA. These steps are identified in Appendix C as requested by the Forum, including estimated time requirements for each step. Appendix C assumed a certain timeframe for <u>initiating</u> negotiations, but as these are not definitive, this information should only be treated as an EXAMPLE of the <u>relative</u> time scale of any settlement process.

CREDITING RATIO

The 2000 Program applied a 2:1 ratio to all remaining habitat units (HU) in the Ledger that had not been previously satisfied by habitat acquisitions and projects, and went into effect on April 1, 2001. The balance of HU's that remained on April 1, 2001 were to be doubled as a means of "settling" questions over the actual mitigation work remaining to reach full compensation for dam inundation and construction losses. NPCC specified that all credits from projects prior to April 2001 were to remain at the levels previously agreed to by BPA and project proponents. At its April 2010 meeting, the NPCC responded to questions put forth by some Forum members with respect to this policy, and confirmed its earlier policy decision establishing a 2:1 ratio effective April 1, 2001. Notwithstanding the NPCC's recent confirmation, two Forum members groups (BPA and WDFW) requested that their positions with respect to 2:1 be recorded in this summary report:

• According to BPA, all agreements between BPA and project proponents over the last 10 years have effectively set other ratios. BPA's position is that the NPCC did not mandate 2:1, and cites all subsequent project agreements to demonstrate that the "rule" to the extent it was a rule is essentially moot at best. Application of the BPA

position from April 1, 2001 onward would change the *Total Lost HU's Outstanding* figure in Table I-2 from 349,774 to 141,376.

• The Washington Department of Fish and Wildlife (WDFW) agrees with the 2:1 ratio but asserts that it should be applied to projects from <u>1990</u> onward. The stated basis for this position is that Washington lost out on potential mitigation credits by having been more efficient in getting mitigation projects on the ground before 2001. Current HU acquired prior to 1990 total to 86,019, or 33% of the ledger total. Application of the WDFW position from January 1, 1990 onward would change the *Total Lost HU's Outstanding* figure in Table I-2 from 352,822 to 459,924.

The application of the 2:1 mitigation ratio results in a change in the total habitat units outstanding for mitigation. Table I-2 show the increase in habitat units or acreage needed to meet the mitigation obligation with the 2:1 ratio applied. Data on HUs are currently maintained at the project level, and acquisition data is maintained at the parcel level. Project level data captures the three types of habitat units recorded: current, protected, and enhancement. Of particular concern is that the Protected and Enhanced HU's do not sum up to the Current HU total. The Protected and Enhanced credits should sum up to provide the Current total, however there is a greater number of Current HU's than the sum of Protected and Enhanced HU's.

Habitat Unit Status		Current HU's
Lost HU Total		404,567
FY1978 – FY 2001 Current HU's	-	(196,169)
Pre-2001 Program Balance		208,398
Post-2001 Agreements with 1:1		No Data
Application of 2:1 Ratio	+	208,398
FY2002 – FY2010 Current HU's	-	(51,570)
Total Lost HU's Outstanding		365,226
Parcels without Acquisition Date Data		15,452
Grand Total		349,774

Table I-2: 2001 Program Ratio Application to HU Ledger

* Some parcels do not have acquisition date information. These parcels sum up to 15,452 Current HU's and apply to the total. Some of these will apply in the pre-2001 period and some after. Total in this table is conservatively treating all of these as post-2001.

HYDROELECTRIC FACILITY CREDIT ASSIGNMENTS

Credits are assigned to specific FCRPS hydroelectric facilities. In some cases, credits have been assigned to hydro facilities in different sub-basins from the actual project, to facilities that are more distant from projects than other hydro sites, or to more than one facility. Although to an extent a recordkeeping issue, this practice has resulted in uncertainty over what HU's remain in any given sub-basin, whether mitigation has been adequately met for a given dam (or even over-mitigated), and concern that other sub-basins may end up being "short changed" when mitigation responsibilities are rolled up to the system-wide total. Table J-1 lists the facilities and shows the assignment of estimated habitat units by each grouping. Figure 1 maps the location of wildlife projects and shows the relationship with facilities mitigated by the projects. Forum members have asked that the assignment of wildlife projects to multiple dams be evaluated. The listing in Table J-1 indicates a number of projects assigned to multiple dams. The available data does not specify the specific division of HU's to each dam. The way the data is stored in the Ledger prevents double counting of credits when applied to multiple projects, but it does create new groupings of dams in addition to individual dams. Accordingly, a single dam may not easily be reviewed based on mitigation projects. Another concern raised by the Forum was the sets of species used for HEP evaluation when spread across multiple dams. The available data does not indicate the species used, or if the species at the dam site are the same as at the wildlife project site.

In general, the geographic distribution of projects effectively assigns projects to the closest dam. In some cases this can be a considerable distance, such as in the Lower Snake. However, these projects are in the nearest watershed for the facilities. The Forum has indicated a preference that projects assigned to a hydro facility should at a minimum be in the same province as that hydro facility.

Facility or Grouping	Acres	Current	Protected	Enhancement	Minimum
Albeni Falls	12,533	14,317	5,158	335	10,838
Anderson Ranch	4,163	2,988	1,063	0	1,925

Table J-1: Habitat Units Assigned by Hydroelectric Facility

Notes: The sum of protected, enhancement and minimum HU's should equal current HU. However, some parcels are still being updated and a small discrepancy exists between the totals. This is due to some protected numbers being lower than minimum. The protected total is kept here to document the existing HEP results even if less than the minimum.

Table J-2 provides the sum of habitat units by hydroelectric facility captured in the NPCC adopted 2009 *Program Table C-4* (see additional discussion of this *Table C-4* under the earlier **Loss Assessments** topic of this summary report). The first sum includes the gains in habitat units from inundation. The second column sums only the losses tallied in the report. Because the credits from parcels are assigned to multiple projects in some cases, this table does not match Table J-1 categories exactly.

Facility	Habitat Units (Exc. Gains)
Albeni	-28,658
Anderson Ranch	-9,619
Black Canyon	-2,170
Bonneville	-12,317
Chief Joseph	-8,833
Deadwood	-4,787

Grand Coulee	-111,515
John Day	-36,555
Lower Snake	-26,774
McNary	-23,545
Minidoka	-10,503
Palisades	-37,070
The Dalles	-2,330
Total	-343,128

Table J-2: Loss Assessments by Facility

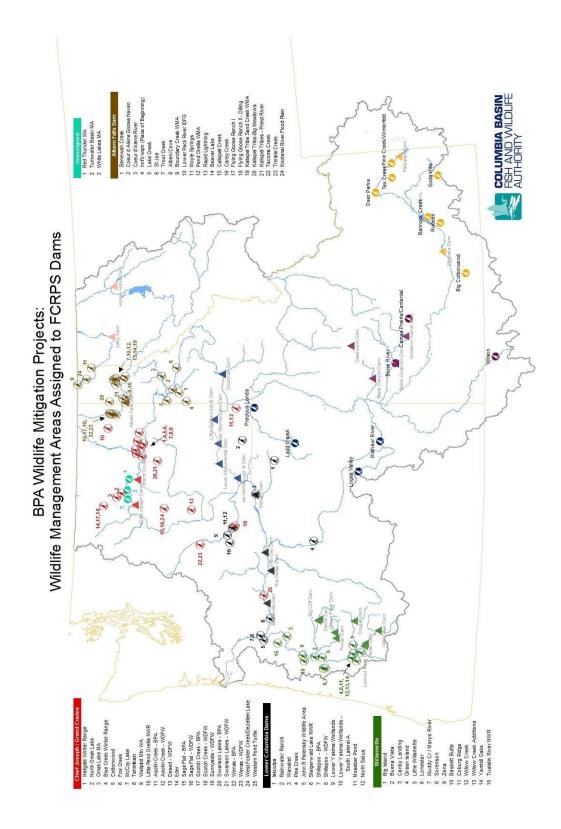

Figure 1: Projects and Facilities Mitigated

OPERATION AND MAINTENANCE

The success of mitigation projects often relies on active and ongoing management to maintain the habitat benefits obtained from land acquisition and restoration. Crediting decisions that favor projects with built-in operation and maintenance (O&M) funding and higher BPA O&M cost shares may be appropriate.

The 2007 Independent Economic Analysis Board (IAEB) report, "Investigation of Wildlife O&M Costs" identified several key findings. The findings relevant to the charter of the Forum include:

- O&M cost data in Pisces is very coarse and needs to be more detailed to provide support for informed comparisons. Current data on O&M does not allow for parcel to parcel comparisons.
- IAEB recommended data be added to Pisces to capture the other non-BPA cost shares and the expected life of investments.

These findings are still a challenge for Pisces, as O&M funding and cost-share data is incomplete. Funding amounts and cost share percentages are available for only approximately a third of the total projects included in the WCP. Even at this partial level of reporting, the O&M funding amounts are only available from FY10, and cost share percentages only from FY09. For funding, the amounts for FY10 ranged from \$12,000 up to \$1.5 million. Based on these two time periods, definitive conclusions cannot be drawn.

INUNDATION GAINS

The permanent dam reservoir pools resulting from inundation created a significant expansion of open water habitat on the Columbia River. Not all wildlife species benefiting (and expanding) from new open water were those that lost suitable habitat due to inundation. Tribes and agencies (WDFW and IDFG) participating at the Forum's December meeting concurred that allowing crediting for such species did not appear to be appropriate. Some suggested that such gains were only appropriate (perhaps) in Operational Loss discussions (Operational Losses have been taken off the table by the Forum). BPA felt that there are legitimate circumstances where open water gains should be accounted for, but they may apply to operational losses and not the construction and inundation losses. The following species appear to have benefited from open water gains created by inundation:

Species	Habitat Units	
Bald Eagle	5,693	
Black-capped Chickadee	68	
Common Merganser	1,042	
Greater Scaup	820	
Lesser Scaup	20,577	
Mallard	174	
Mallard (wintering)	13,744	
Marsh Wren	207	
Osprey	6,159	
Redhead	4,475	
Other Waterfowl	423	
Western Grebe	273	
Yellow Warbler	8	
Total	53,663	

Table L-1: Species and Gains from the 2009 Wildlife Program

PRE-ACT MITIGATION

Prior to the Northwest Power Act of 1980, official mitigation efforts in response to FCRPS system impacts were undertaken by Federal water resource managers (U.S. Army Corps of Engineers, Bureau of Reclamation) and the U.S. Fish and Wildlife Service. Some mitigation actions go back as far as the 1930's, and in many cases are very difficult or impossible to fully document and assess. Wildlife mitigation prior to 1980 was in part generated through consultation with the US Fish and Wildlife Service under the Fish and Wildlife Coordination Act of 1934, and the subsequently more rigorous requirements from amendments in 1946 and 1958. The majority of the Pre-Act mitigation is associated with the McNary and John Day dams. The 1991 Geiger Report and 2004 USFWS Coordination Act Report identified 50,938 acres of Pre-Act mitigation.

APPENDIX A

HEP Crediting (Hames) Sub-committee Report

April 20-21, 2010 Crediting Forum Technical Team (The Hames Commission) Meeting

The Hames Commission addressed technical HEP issues that make reconciling the crediting ledger difficult and contribute to the misunderstandings and disagreements within the region on crediting. We identified issues in three tiers with the first tier representing technical HEP issues, the second tier focusing more on sub-regional issues that have policy implications for some but not all managers or areas in the region, and the third tier being primarily overarching, regional policy issues needing resolution. We sought to establish a foundation for greater consistency to the extent possible while recognizing the limitations of existing agreements. The following are working notes from the meeting and have not received regional peer review or input.

Tier 1 Issues: Technical HEP w/ little or no policy implications

Sources of Variation in crediting due to HEP methods

- 1. Cover Typing Delineation of cover type boundaries
- 2. Similarity (or lack thereof), between habitats characterized in losses and compensation lands
- 3. Choice of HEP species- for original losses and compensation lands
 - Should be a good representation of habitat quality
- 4. Lack of peer review or consistency of HEP models chosen for losses or compensation lands.
- 5. Choice of substitute HEP species when out of kind-
 - Covering same habitat attributes with same number of species
- 6. Modification or lack of suitable modification of HEP models.
 - Appropriate/inappropriate selection of model
 - Use of updated models for mitigation while losses are static with old models.
 - Appropriate/inappropriate alteration of equations to address site specific realities.
 - Real world differences in application of model from original area
- 7. Field Data Collection techniques-
 - Changes in Techniques and intensity of survey
 - Changes in survey staff
 - Season of survey/phenology
 - Under represented or over represented cover types

Variation SOP:

- Use tools, models, and methods that most accurately reflect the quality and quantity of the habitats being protected and managed.
- HEP methods used should reflect the site specific habitat parameters and management goals of the property and may differ from the HEP methods used in determining the losses.
- When disagreements arise, the project proponent should seek resolution through consultation with BPA, HEP team, and sub-basin or provincial co-managers to assure consistency and accuracy.
- Consider validating new or significantly modified models with appropriate testing and review.

Species Stacking

Stacking occurs when multiple species are used to characterize the quality of a single cover type. It becomes a crediting issue when the same number of species used to assess losses are not in turn used to characterize the compensation lands. Stacking is an issue of how you adjust the credits of the mitigation sites to be in balance with the number of species used to characterize the losses. Loss assessments are what they are and should not be revised or replaced to address stacking issues.

Stacking SOP

- SOP options to address staking issues include:
 - a. Use the same number of species to characterize the out of kind cover types as were used to characterize the loss assessment cover types.
 - b. If using fewer species to characterize the mitigation site cover type than were used to characterize the losses, average the HSIs of the out of kind mitigation cover types and multiply by the number of species used in the losses. However, species selection must be peer reviewed and approved by the regional HEP team, BPA and the project proponent.
 - c. If incidental out of kind cover types (inclusions) are associated with a mitigation acquisition, assume the same HSI as the adjacent cover type.
 - d. Willamette crediting will use the CHAP methodology to address stacking issues.
 - e. Do not credit the same acres of a given cover type between two or more hydro projects with a combination of species from both.

Tier 2 Issues: Sub-regional issues with policy implications

Crediting public lands actions, trust lands, and non-permanent or unsecured lands mitigations

How to credit BLM lease for range lands.

How to credit State DNR Land mitigations.

How to credit BIA Trust lands leases or easements

How to credit leases or easements on fee lands

How to credit areas where BPA contributed to but did not fully provide protection or operations and maintenance funding.

How to credit BPA where they were not involved in the protection of the habitat but provide all or part of the O&M and enhancements.

Crediting SOP:

- Project proponents must provide minimum irreducible HU letter for each compensation site including statements on each of the following issues:
 - a. Hydro project being mitigated
 - *b.* Cover type(s) and target species used to characterize habitat quality on the compensation site
 - c. Commitment to follow SOPs to quantify and qualify habitat
 - d. Minimum number of habitat units being credited from the site
- *Crediting of Non-permanent protection- The Hames Commission recommends that the region have a Crediting SOP covering sites without permanent protection. The specific operating procedure adopted needs to be further defined and agreed to.*
- Partial purchase- credit for proportion of protection funding provided
- Partial O&M or enhancements- credit for HU increases proportional to 10 year average investment.
- Credit for leases that may not provide permanent protection- credit against operational or secondary losses or normal full credit when the protection and credit from a non-permanent compensation site gets rolled over to another non-permanent site with an equal or greater amount of habitat value
- Credit for lands protected with partial lease such as the purchase of an annual grazing lease on Indian trust lands or a federal grazing allotment receive credit for cover types

enhanced by the annual protection and O&M. Assumption of replacement with similar lease if lease terminated.

Tier 3 Issues: Policy level resolution required

- 1. Socio-political issues of crediting projects that are out of kind and out of place from impacts.
- 2. Allocation HUs among resource managers.
 - a. Crossing political boundaries with mitigation actions.
 - b. Crossing ecological/population boundaries.
- 3. Crediting of fish projects against construction and inundation wildlife losses.
- 4. Crediting non-permanent or unsecured lands
- 5. How to deal with "over mitigation"?

Where do we go from here?

- 1. Regional Agreements on SOPs after vetting through all Forum members.
- 2. Direct the HEP team to work with project managers at each compensation site to address technical shortcomings identified above.
 - For new projects, do this with baseline HEPs.
 - For existing projects, do this with follow-up HEPs.
 - Consider adding to HEP team's contract an express mandate and responsibility to identify inconsistencies in technical HEP applications throughout the region.
- 3. Incorporate fish credit findings and recommendations as appropriate.
- 4. Reassign credits within lower four mainstem Columbia River dams.
 - Unlike other areas in the basin, the lower four crediting can be reassigned based on existing HEP reports, so no need to wait or gather additional data.
- 5. Develop draft ledger for recommendation to Council for review and approval.
 - The ledger will report HUs protected and enhanced through the Council's Fish and Wildlife Program.

APPENDIX B

Loss Assessment Summary, Table C-4, 2009 Program

Species	Total Habitat Units
Albeni Falls

Monitor and Evaluate Wildlife Efforts at Non-federal **Projects**

Non-federal hydroelectric projects are licensed by the Federal Energy Regulatory Commission. The Electric Consumers Protection Act of 1986 (ECPA) mandates that the Federal Energy Regulatory Commission give equal consideration to the protection, mitigation of damage to, and enhancement of wildlife in licensing and relicensing decisions.

Mitigation Considerations in Dam Licensing Decisions

Federal Energy Regulatory Commission

In developing license conditions, take into account to the fullest extent practicable the policies established in this section, and the measures taken by Bonneville and others to implement this section. In particular, it is important to take into account the mitigation efforts at federal projects undertaken pursuant to this section, to ensure that license conditions are consistent with and complement these wildlife mitigation projects and contribute fully and proportionately to regional wildlife mitigation goals.

Council

The Council will monitor the Federal Energy Regulatory Commission licensing and relicensing proceedings and comment or intervene where appropriate.

APPENDIX D

Sub-basin Reviews

Lower Columbia and Lower Snake

March, 2011

Introduction

The Wildlife Crediting Forum (**Forum**) was chartered in late 2009 by the Northwest Power and Conservation Council (**NPCC**) to provide input on the Council's Wildlife Crediting Program (**WCP**). NPCC chartered the Forum to provide advice on the quantifying and accounting system (informally known as the **Ledger**) for the wildlife habitat mitigation credits associated with the construction and inundation impacts of the Federal Columbia River Power System (**FCRPS**) within the Columbia River Basin (**Basin**). The database that currently houses the Ledger is called **Pisces**. The WCP was initiated in 1981, and has been modified from time to time (most recently in 2009) by NPCC in updating the overarching Columbia River Basin Fish and Wildlife Program (**Program**).

The activities of the Forum are documented in a **Forum Summary Report** that is currently in review draft. As requested at the December 2, 2010 meeting of the Forum, four separate sub-regional (see the table below for sub-regions) analyses have been performed to understand the implication of various crediting choices and decisions. These four supplemental analyses reflect the heading structure of the overall Summary Report, but provide more detail to help review each sub-region's remaining issues with respect to the WCP. *Note: The ratings in the "Level of Agreement" table below were made in consultation with NPCC staff. Although reviewed in draft form by the Forum on December 2, 2010, these ratings have not been concurred in by the Forum.*

	A. Federal Lands	B. Fish Projects	C. HEP Issues	D. Loss Assessment	l. Ratios	J. Facility Assignment	K. O&M	L. Inundation Gains	M. Pre-Act Mitigation

Upper Snake	Low	High	Medium	Low	Low	Low	Low	Medium	High
Northern Idaho	High	High	Low	Low	Low	High	Low	High	High

Level of Agreement on Issues by Sub-Region

Data Source

The data used here is an updated version of the Ledger from the wildlife mitigation data in Pisces and in the Program. Updates include new information from managers and the regional HEP team. This data includes some parcels not included in Pisces and will differ from reports generated out of Pisces.

To conduct the analysis for each region parcel level data was necessary. In some cases HEP data is available at the parcel level. However, many follow-up HEP surveys have only been recorded in Pisces at the Wildlife Management Area (WMA) level. In this case, the WMA data was apportioned to parcels based on the acreage ratio of the parcel to area. In some cases the minimum HU letter was the only source for HU data, or the minimum HU amount was greater than subsequent HEP surveys. In these cases the minimum HU was used as the parcel's value.

A. Federal Lands

There are no remaining issues on the use of federal lands for wildlife mitigation projects in this subregion. The sole project using federal land occurred with the US Fish and Wildlife Service Steigerwald Lake National Wildlife Refuge.

B. Credits for Fish Mitigation

Of the 24 fish projects reviewed by Forum, 18 are within this sub-region. Included in these are all of the Tier 3 projects that are considered least likely candidates for inclusion as construction and inundation mitigation.

Parcel Name	Proponent	Sub-Basin	Acres	Tier
Forrest Conservation Area	CTWSRO	John Day	4,232	1
Oxbow Conservation Area	CTWSRO	John Day	1,022	1
Pine Creek (Wagner Conservation Area)	CTWSRO	John Day	9,000	1
Rainwater Wildlife Area (Part II)	CTUIR	Walla Walla	2,340	1
Yakima Side Channels (Lower Naches)	Yakama Nation	Yakima	376	1
Yakama Nation Riparian/Wetlands Restoration	Yakama Nation	Yakima	5,000*	1
Oak Flats (Naches River)	WDFW	Yakima	289	2
Red River Wildlife Area (Little Ponderosa)	IDFG	Clearwater	1,300	2
Sandy River Delta	Forest Service	Sandy	1,400	2
Yakima Side Channels (Upper Yakima)	Yakama Nation	Yakima	544	2
Zumwalt Prairie Preserve (Camp Creek Ranch)	Nature Conservancy	Imnaha	27,000	2
Crims Island	Columbia Land Trust	Columbia Estuary	451	3
Crazy Johnson Creek	Columbia Land Trust	Grays	305	3
Crooked Creek (F&W)	Columbia Land Trust	Columbia Estuary	60	3
Elochoman River	Columbia Land Trust	Columbia Estuary	183	3
Germany Creek	Columbia Land Trust	Columbia Estuary	155	3
Walker Island	Columbia Land Trust	Columbia Estuary	100	3

Table B-1: Candidate Fish Projects for Wildlife Credits

Columbia Land Hust Columbia Estuary 512 5	Willow Grove	Columbia Land Trust	Columbia Estuary	312	3
---	--------------	---------------------	------------------	-----	---

These projects are expected to meet the following requirements before inclusion in the Ledger:

- Specific wildlife management plans for the project area need to be completed, approved and implemented.
- Long-term operations and maintenance funding for wildlife species/habitats must be in place and "adequate".
- Appropriate permanent land protections (easements) should be applied, in perpetuity and with adequate protection language.
- The protected wildlife species/populations/habitats should be "priority" and so defined by in-place Federal, state or tribal management or sub-basin plans.

Unique to this sub-region are the Columbia River Estuary projects that are currently Tier 3. Most recent discussions have indicated that these projects will not provide credits for the Construction and Inundation Losses, but rather may apply to future mitigation for Operation Losses.

C. HEP Application Variations

The variation of HEP models has some issues in this sub-regional group. Paul Ashley, of the regional HEP team, has developed proposed solutions for the Malheur River WMA where crediting for a unique land ownership pattern is required. In general the loss assessment and projects in this sub-region have applied HEP more uniformly when compared with other sub-regions in the Basin.

Manager	Acres	Current	Protected	Enhancement	Minimum
Burns-Paiute Tribe	8,145	4,705	3,937	768	0
Confederated Tribes Of Warm Springs	25,146	18,976	14,057	4,919	0
Nez Perce Tribe	10,306	21,118	21,118	0	0
ODFW	1,336	1,960	1,547	413	0
Umatilla Confederated Tribes (CTUIR)	17,470	12,842	12,091	751	0
USFWS	317	201	201	0	0
WDFW	10,762	6,753	3,578	3,175	0
Yakama Nation	21,479	35,130	34,077	973	80
Grand Total	94,961	101,685	90,606	10,999	80

Table	C-1:	Acres	and	HU	bv	Manager*
1 4010	• • •	/ 10/ 00	ana		~,	managoi

* Note: In general, the Current total is a sum of the Protected, Enhanced and where applicable Minimum HU totals by WMA. Minimum values are summed only when they are greater than the results of HEP surveys or no HEP survey has been entered into Pisces.

I. Ratio Application

The application of any ratios in the WCP are not agreed on by all Forum members, but are documented in the Forum Summary Report. Table I-1 below documents how projects in this sub-region break out based on the year they were booked to the Ledger.

The percentage column measures the proportion of projects which the 2:1 ration would apply to, based on the 2009 Program. Multiple opinions were expressed on how to handle the results of this ratio analysis, and further analysis should be completed manager-by-manager as needed. Table J-2 below provides the losses for this sub-region and those losses can be compared to Table I-4 to determine the level of mitigation. If 2:1 is the adopted policy, the 1978-2001 total can be subtracted 1:1 from the losses. The remainder then can be doubled to compare to the 2001-Present data.

Fiscal Years	Parcel Current HU	Percent of Total
1978-2001	93,140	91.6%
2001-Present	855	0.84%
No Data	7,690	7.56%
Grand Total	100,534	100%

Table I-1: Dates of Project Credits

J. Facility Assignment

Because of the early projects and many parties in this sub-region, the assignment of projects to facilities is still unresolved. The primary issue of concern is the assignment of project credits across multiple projects and between the various managers. Paul Ashley of the regional HEP team is developing a proposed approach to resolving the decisions made on assigning the credits.

Please note that in Table J-1, a number of projects are combined together and it is not clear how to separate out the portion of HU's assigned. This creates a series of composite projects with multiple facilities listed.

Projects	Current	Protected	Enhanced	Minimum
Bonneville OR, Cougar, Hills Creek	1,319	1,319	0	0
Bonneville WA	226	213	13	0
Bonneville WA, John Day WA	2,359	1,622	737	0

Bonneville	-12,317
John Day	-36,555
Lower Snake	-26,774
McNary	-23,545
The Dalles	-2,330
Total	-101,521

L. Inundation Gains

The 2009 Program includes totals for species gains from inundation, but does not specify the role of these gains in evaluating mitigation. The data is presented here as additional issue to be addressed at the sub-region. Two species are included in the adopted 2009 *Program Table C-4* for this sub-region. They are:

Table L-1: Inundation Gains by Species

Species	HU
Lesser Scaup	19,137
Mallard (Wintering)	13,744
Total	32,881

M. Pre-Act Mitigation

Pre-Act mitigation primarily applies to this sub-region. The 1991 Geiger Report and 2004 USFWS Coordination Act Report identified 50,938 acres of Pre-Act mitigation.

Parcel Accounting Concerns

Parcel data has been updated with assistance from managers and the HEP regional team leader. This is reflected in the parcel data attached to this report. WDFW data is one area that may require extra review. Updates were made based on WDFW comments – but a mix of parcel and project names may have caused some updates to be captured slightly incorrectly. This is not expected to impact totals.

Introduction

The Wildlife Crediting Forum (**Forum**) was chartered in late 2009 by the Northwest Power and Conservation Council (**NPCC**) to provide input on the Council's Wildlife Crediting Program (**WCP**). NPCC chartered the Forum to provide advice on the quantifying and accounting system (informally known as the **Ledger**) for the wildlife habitat mitigation credits associated with the construction and inundation impacts of the Federal Columbia River Power System (**FCRPS**) within the Columbia River Basin (**Basin**). The database that currently houses the Ledger is called **Pisces**. The WCP was initiated in 1981, and has been modified from time to time (most recently in 2009) by NPCC in updating the overarching Columbia River Basin Fish and Wildlife Program (**Program**).

The activities of the Forum are documented in a **Forum Summary Report** that is currently in review draft. As requested at the December 2, 2010 meeting of the Forum, four separate sub-regional (see the table below for sub-regions) analyses have been performed to understand the implication of various crediting choices and decisions. These four supplemental analyses reflect the heading structure of the overall Summary Report, but provide more detail to help review each sub-region's remaining issues with respect to the WCP. *Note: The ratings in the "Level of Agreement" table below were made in consultation with NPCC staff. Although reviewed in draft form by the Forum on December 2, 2010, these ratings have not been concurred in by the Forum.*

	A. Federal Lands	B. Fish Projects	C. HEP Issues	D. Loss Assessment	l. Ratios	J. Facility Assignment	K. O&M	L. Inundation Gains	M. Pre-Act Mitigation
Lower Four and Lower Snake	High	Low	Low	High	Low	Low	Low	Low	Low

Level of Agreement on Issues by Sub-Region

Data Source

The data used here is an updated version of the Ledger from the wildlife mitigation data in Pisces and in the Program. Updates include new information from managers and the regional HEP team. This data includes some parcels not included in Pisces and will differ from reports generated out of Pisces.

To conduct the analysis for each region parcel level data was necessary. In some cases HEP data is available at the parcel level. However, many follow-up HEP surveys have only been recorded in Pisces at the Wildlife Management Area (WMA) level. In this case, the WMA data was apportioned to parcels based on the acreage ratio of the parcel to area. In some cases the minimum HU letter was the only source for HU data, or the minimum HU amount was greater than subsequent HEP surveys. In these cases the minimum HU was used as the parcel's value.

A. Federal Lands

There no current issues on the use of federal lands for wildlife mitigation projects in this sub-region.

B. Credits for Fish Mitigation

There are no fish projects within this sub-region.

C. HEP Application Variations

The variation of HEP models at facilities and at mitigation projects sites is not considered a challenge aside from some individual cases. In general the loss assessment and projects in this sub-region have applied HEP more uniformly when compared with other sub-regions in the Basin.

Manager	Acres	Current	Protected	Enhancement	Minimum
CdA Tribe	3,432	3,284	1,671	239	3,155
CdA Tribe, IDFG, Kalispel Tribe, KTI	163	454	454	0	0
IDFG	3,660	4,046	768	96	3,182
Kalispel Tribe	4,158	5,209	2,150	0	3,292
КТІ	1,120	1,324	115	0	1,209
Grand Total	12,533	14,317	5,158	335	10,838

Table C-1: Acres and HU by Manager*	Table C-1:	Acres	and	ΗU	by	Manager*
-------------------------------------	------------	-------	-----	----	----	----------

* Note: In general, the Current total is a sum of the Protected, Enhanced and where applicable Minimum HU totals by WMA. Minimum values are summed only when they are greater than the results of HEP surveys or no HEP survey has been entered into Pisces. Goose Haven, Benewah and Kalispel Beaver Lake-Strong have Minimum's greater than HEP results. But the HEP results are presented here for reference.

I. Ratio Application

The application of any ratios in the WCP are not agreed on by all Forum members, but are documented in the Forum Summary Report. Table I-1 below documents how projects in this sub-region break out based on the year they were booked to the Ledger.

The percentage column measures the proportion of projects which the 2:1 ration would apply to, based on the 2009 Program. Multiple opinions were expressed on how to handle the results of this ratio analysis, and further analysis should be completed manager-by-manager as needed. Table J-2 below provides the losses for this sub-region and those losses can be compared to Table I-4 to determine the level of mitigation. If 2:1 is the adopted policy, the 1978-2001 total can be subtracted 1:1 from the losses. The remainder then can be doubled to compare to the 2001-Present data.

Table I-1: Dates of Project Credits

Fiscal Years	Parcel Current HU	Percent of Total
1978-2001	6,251	43.7%
2001-Present	6,674	46.6%
No Data*	1,392	9.7%
Grand Total	14,317	100%

* Parcels with no data include: Trout-Elkhorn Flats, Gold Creek, Kline, Marsh, and Shield 2.

J. Facility Assignment

Please note that in Table J-1, a number of projects are combined together and it is not clear how to separate out the portion of HU's assigned. This creates a series of composite projects with multiple facilities listed.

Table J-1: Habitat Unit Assignment to Facilities

Projects	Current	Protected	Enhanced	Minimum
Albeni Falls	14,317	5,158	335	12,533
Grand Total	14,317	5,158	335	12,533

Table J-2: Loss Assessment by Facilities

Facility	Habitat Units (Exc. Gains)
Albeni Falls	-28,658
Total	-28,658

L. Inundation Gains

The 2009 Program includes totals for species gains from inundation, but does not specify the role of these gains in evaluating mitigation. The data is presented here as additional issue to be addressed at the sub-region. One species is included in the adopted 2009 *Program Table C-4* for this sub-region. It is:

Table L-1: Inundation	Gains	by	Species
-----------------------	-------	----	---------

Species	HU
Yellow Warbler	171
Total	171

M. Pre-Act Mitigation

Pre-Act mitigation does not apply to this sub-region.

Parcel Accounting Concerns

Parcel data has been updated with assistance from managers and the HEP regional team leader. This is reflected in the parcel data attached to this report. WDFW data is one area that may require extra review. Goose Haven, Benewah and Kalispel Beaver Lake-Strong have Minimum's HU letter totals greater than subsequent HEP results. These parcels may need to be reviewed.

Upper Columbia

March, 2011

Introduction

The Wildlife Crediting Forum (**Forum**) was chartered in late 2009 by the Northwest Power and Conservation Council (**NPCC**) to provide input on the Council's Wildlife Crediting Program (**WCP**). NPCC chartered the Forum to provide advice on the quantifying and accounting system (informally known as the **Ledger**) for the wildlife habitat mitigation credits associated with the construction and inundation impacts of the Federal Columbia River Power System (**FCRPS**) within the Columbia River Basin (**Basin**). The database that currently houses the Ledger is called **Pisces**. The WCP was initiated in 1981, and has been modified from time to time (most recently in 2009) by NPCC in updating the overarching Columbia River Basin Fish and Wildlife Program (**Program**).

The activities of the Forum are documented in a **Forum Summary Report** that is currently in review draft. As requested at the December 2, 2010 meeting of the Forum, four separate sub-regional (see the table below for sub-regions) analyses have been performed to understand the implication of various crediting choices and decisions. These four supplemental analyses reflect the heading structure of the overall Summary Report, but provide more detail to help review each sub-region's remaining issues with respect to the WCP. *Note: The ratings in the "Level of Agreement" table below were made in consultation with NPCC staff. Although reviewed in draft form by the Forum on December 2, 2010, these ratings have not been concurred in by the Forum.*

	A. Federal Lands	B. Fish Projects	C. HEP Issues	D. Loss Assessment	l. Ratios	J. Facility Assignment	K. O&M	L. Inundation Gains	M. Pre-Act Mitigation
Lower Four and Lower Snake	High	Low	Low	High	Low	Low	Low	Low	Low
Upper Columbia	High	Medium	High	High	Low	High	Low	Medium	High
Upper Snake	Low	High	Medium	Low	Low	Low	Low	Medium	High
Northern Idaho	High	High	Low	Low	Low	High	Low	High	High

Level of Agreement on Issues by Sub-Region

Data Source

The data used here is an updated version of the Ledger from the wildlife mitigation data in Pisces and in the Program. Updates include new information from managers and the regional HEP team. This data includes some parcels not included in Pisces and will differ from reports generated out of Pisces.

To conduct the analysis for each region parcel level data was necessary. In some cases HEP data is available at the parcel level. However, many follow-up HEP surveys have only been recorded in Pisces at the Wildlife Management Area (WMA) level. In this case, the WMA data was apportioned to parcels based on the acreage ratio of the parcel to area. In some cases the minimum HU letter was the only source for HU data, or the minimum HU amount was greater than subsequent HEP surveys. In these cases the minimum HU was used as the parcel's value.

A. Federal Lands

There are no remaining issues on the use of federal lands for wildlife mitigation projects in this subregion.

B. Credits for Fish Mitigation

Of the 24 fish projects reviewed by Forum, 5 are within this sub-region. The projects are all in tier 2, meaning there are several issues that must be reviewed before these can be included in the Ledger.

Parcel Name	Proponent	Sub-Basin	Acres	Tier
Colville Fish Habitat Projects	Colville Tribes	Okonogan	176	2
Cottonwood Farms / Witte Place	NFWF, Methow Conservancy	Methow	54	2
Hancock Springs	NFWF, Methow Conservancy	Methow	122	2
Heath	NFWF, Methow Conservancy	Methow	140	2
Mid-Methow / Lehman	NFWF, Methow Conservancy	Methow	93	2

Table B-1: Candidate Fish Projects for Wildlife Credits

These projects are expected to meet the following requirements before inclusion in the Ledger:

- Specific wildlife management plans for the project area need to be completed, approved and implemented.
- Long-term operations and maintenance funding for wildlife species/habitats must be in place and "adequate".
- Appropriate permanent land protections (easements) should be applied, in perpetuity and with adequate protection language.
- The protected wildlife species/populations/habitats should be "priority" and so defined by inplace Federal, state or tribal management or sub-basin plans.

C. HEP Application Variations

The variation of HEP models at facilities and at mitigation projects sites is not considered a challenge aside from some individual cases. In general the loss assessment and projects in this sub-region have applied HEP more uniformly when compared with other sub-regions in the Basin.

Manager	Acres	Current	Protected	Enhancement	Minimum
Colville Confederated Tribes	59,257	37,731	37,812	0	2,639
Spokane Tribe	4,233	4,487	4,476	0	38
USFWS	906	421	421	0	0
WDFW	141,345	81,079	63,541	15,720	1,014
Grand Total	205,741	123,718	106,250	15,720	3,691

Table C-1: Acres and HU by Manager*

* Note: In general, the Current total is a sum of the Protected, Enhanced and where applicable Minimum HU totals by WMA. Minimum values are summed only when they are greater than the results of HEP surveys or no HEP survey has been entered into Pisces. Colville parcels Brim, Jacobson, and Redthunder have Minimum's greater than HEP results. But the HEP results are presented here for reference.

I. Ratio Application

The application of any ratios in the WCP are not agreed on by all Forum members, but are documented in the Forum Summary Report. Table I-1 below documents how projects in this sub-region break out based on the year they were booked to the Ledger.

The percentage column measures the proportion of projects which the 2:1 ration would apply to, based on the 2009 Program. Multiple opinions were expressed on how to handle the results of this ratio analysis, and further analysis should be completed manager-by-manager as needed. Table J-2 below provides the losses for this sub-region and those losses can be compared to Table I-4 to determine the level of mitigation. If 2:1 is the adopted policy, the 1978-2001 total can be subtracted 1:1 from the losses. The remainder then can be doubled to compare to the 2001-Present data.

Fiscal Years	Parcel Current HU	Percent of Total
1978-2001	77,074	62.3%
2001-Present	40,274	32.6%
No data	6,370	5.1%
Grand Total	123,718	100%

Table I-1: Dates of Project Credits

J. Facility Assignment

Assignment of habitat units to facilities is most clear for this sub-region. Please note that in Table J-1, a number of projects are combined together and it is not clear how to separate out the portion of HU's assigned. This creates composite projects with multiple facilities listed.

Projects	Current	Protected	Enhanced	Minimum
Chief Joseph	3,941	3,941	0	0
Chief Joseph, Grand Coulee	41,884	40,145	1,637	2,570
Chief Joseph, John Day WA,	1,193	776	417	0
McNary WA				
Grand Coulee	76,700	61,388	13,666	1,121
Grand Total	123,718	106,250	15,720	3,691

Table J-1: Habitat Unit Assignment to Facilities

Table J-2: Loss Assessment by Facilities

Facility	Habitat Units (Exc. Gains)
Chief Joseph	-8,833
Grand Coulee	-111,515
Total	-120,348

L. Inundation Gains

The 2009 Program includes totals for species gains from inundation, but does not specify the role of these gains in evaluating mitigation. The data is presented here as additional issue to be addressed at the sub-region. One species is included in the adopted 2009 *Program Table C-4* for this sub-region. It is:

Table L-1: Inundation Gains by Species

Species	HU
Lesser Scaup	1,440
Total	1,440

M. Pre-Act Mitigation

Pre-Act mitigation does not apply to this sub-region.

Parcel Accounting Concerns

Parcel data has been updated with assistance from managers and the HEP regional team leader. This is reflected in the parcel data attached to this report. WDFW data is one area that may require extra review. Colville parcels Brim, Jacobson, and Redthunder have Minimum's greater than HEP results. These parcels may need to be reviewed.

Upper Snake

March, 2011

Introduction

The Wildlife Crediting Forum (**Forum**) was chartered in late 2009 by the Northwest Power and Conservation Council (**NPCC**) to provide input on the Council's Wildlife Crediting Program (**WCP**). NPCC chartered the Forum to provide advice on the quantifying and accounting system (informally known as the **Ledger**) for the wildlife habitat mitigation credits associated with the construction and inundation impacts of the Federal Columbia River Power System (**FCRPS**) within the Columbia River Basin (**Basin**). The database that currently houses the Ledger is called **Pisces**. The WCP was initiated in 1981, and has been modified from time to time (most recently in 2009) by NPCC in updating the overarching Columbia River Basin Fish and Wildlife Program (**Program**).

The activities of the Forum are documented in a **Forum Summary Report** that is currently in review draft. As requested at the December 2, 2010 meeting of the Forum, four separate sub-regional (see the table below for sub-regions) analyses have been performed to understand the implication of various crediting choices and decisions. These four supplemental analyses reflect the heading structure of the overall Summary Report, but provide more detail to help review each sub-region's remaining issues with respect to the WCP. *Note: The ratings in the "Level of Agreement" table below were made in consultation with NPCC staff. Although reviewed in draft form by the Forum on December 2, 2010, these ratings have not been concurred in by the Forum.*

	A. Federal Lands	B. Fish Projects	C. HEP Issues	D. Loss Assessment	l. Ratios	J. Facility Assignment	K. O&M	L. Inundation Gains	M. Pre-Act Mitigation
Lower Four and Lower Snake	High	Low	Low	High	Low	Low	Low	Low	Low
Upper Columbia	High	Medium	High	High	Low	High	Low	Medium	High
Upper Snake	Low	High	Medium	Low	Low	Low	Low	Medium	High
Northern Idaho	High	High	Low	Low	Low	High	Low	High	High

Level of Agreement on Issues by Sub-Region

Data Source

The data used here is an updated version of the Ledger from the wildlife mitigation data in Pisces and in the Program. Updates include new information from managers and the regional HEP team. This data includes some parcels not included in Pisces and will differ from reports generated out of Pisces.

To conduct the analysis for each region parcel level data was necessary. In some cases HEP data is available at the parcel level. However, many follow-up HEP surveys have only been recorded in Pisces at the Wildlife Management Area (WMA) level. In this case, the WMA data was apportioned to parcels based on the acreage ratio of the parcel to area. In some cases the minimum HU letter was the only source for HU data, or the minimum HU amount was greater than subsequent HEP surveys. In these cases the minimum HU was used as the parcel's value.

A. Federal Lands

There are no remaining issues on the use of federal lands for wildlife mitigation projects in this subregion.

B. Credits for Fish Mitigation

Three potential fish projects on federal land need to be further evaluated. These are Bear Valley, Deer Creek and Elk Creek. The projects were riparian fish projects completed on US Forest Service property may include some wildlife habitat benefits associated with the management actions. These projects are expected to meet the following requirements before inclusion in the credit Ledger:

- Specific wildlife management plans for the project area need to be completed, approved and implemented.
- Long-term operations and maintenance funding for wildlife species/habitats must be in place and "adequate".
- Appropriate permanent land protections (easements) should be applied, in perpetuity and with adequate protection language.
- The protected wildlife species/populations/habitats should be "priority" and so defined by inplace Federal, state or tribal management or sub-basin plans.

C. HEP Application Variations

The primary source of concern for HEP application is in the loss assessments. The Shoshone-Bannock, Shoshone-Paiute, Idaho Department of Fish and Game (IDFG) and CBWFA staff are re-examining the Anderson Ranch, Palisades, Black Canyon, Minadoka, and Deadwood loss assessments for accuracy and consistency relative to other loss assessments across the Basin.

Manager	Acres	Current	Protected	Enhancement	Minimum
IDFG	10,193	14,886	13,059	459	1,368

Table C-1: Acres and HU by Manager*

Grand Total	16,291	23,471	18,957	2,363	2,151
Shoshone-Paiute Tribes	938	557			557
Shoshone-Bannock Tribes	5,160	8,028	5,898	1,904	226

* Note: In general, the Current total is a sum of the Protected, Enhanced and where applicable Minimum HU totals by WMA. Minimum values are summed only when they are greater than the results of HEP surveys or no HEP survey has been entered into Pisces.

I. Ratio Application

The application of any ratios in the WCP are not agreed on by all Forum members, but are documented in the Forum Summary Report. Table I-1 below documents how projects in this sub-region break out based on the year they were booked to the Ledger.

The percentage column measures the proportion of projects which the 2:1 ration would apply to, based on the 2009 Program. Multiple opinions were expressed on how to handle the results of this ratio analysis, and further analysis should be completed manager-by-manager as needed. Table J-2 below provides the losses for this sub-region and those losses can be compared to Table I-4 to determine the level of mitigation. If 2:1 is the adopted policy, the 1978-2001 total can be subtracted 1:1 from the losses. The remainder then can be doubled to compare to the 2001-Present data.

Table I-1: Dates of Project Credits

Fiscal Years	Parcel Current HU	Percent of Total
1978-2001	19,703	84%
2001-Present	3,768	16%
Grand Total	23,471	100%

J. Facility Assignment

Please note that in Table J-1, a number of projects are combined together and it is not clear how to separate out the portion of HU's assigned. This creates a series of composite projects with multiple facilities listed.

Table J-1: Habitat Unit Assignment to Facilities

Projects	Current	Protected	Enhanced	Minimum
Anderson Ranch	2,988	1,063	0	1,925
Black Canyon	57	57	0	0
Deadwood	0	0	0	0
Minidoka	338	112	0	226
Minidoka, Palisades	3,769	2,576	1,193	0
Palisades	16,319	15,149	1,170	0
Grand Total	23,471	18,957	2,363	2,151

Facility	Habitat Units (Exc. Gains)
Anderson Ranch	-9,619
Black Canyon	-2,170
Deadwood	-4,787
Minidoka	-10,503
Palisades	-37,070
Grand Total	-64,149

Table J-2: Loss Assessment by Facilities

L. Inundation Gains

The 2009 Program includes totals for species gains from inundation, but does not specify the role of these gains in evaluating mitigation. The data is presented here as additional issue to be addressed at the sub-region. Six species are included in the adopted 2009 *Program Table C-4* for this sub-region. They are:

Species	HU
Black-capped Chickadee	68
Mallard	174
Marsh Wren	207
Redhead	4,475
Western Grebe	273
Yellow Warbler	8
Total	5,205

Table L-1: Inundation Gains by Species

M. Pre-Act Mitigation

Pre-Act mitigation does not apply to this sub-region.

Parcel Accounting Concerns

Parcel data has been updated with assistance from managers and the HEP regional team leader. This is reflected in the parcel data attached to this report.
